NEW WIDEBAND TYMPANOMETRY

TYMPSTAR PRO™ WITH WIDEBAND TYMPANOMETRY

The GSI TympStar Pro™ provides a full range of middle ear measurements on patients of all ages. Our versatile touchscreen clinical tympanometer now includes WideBand Tympanometry testing capabilities. WideBand Tympanometry provides an in-depth, comprehensive assessment of the status of the middle ear in the same amount of time it takes to complete a traditional 226 Hz tympanogram. Using the wideband click stimulus, a single pressure sweep yields tympanograms at multiple frequencies, a wideband average tympanogram, and middle ear wideband absorbance test results.

WIDEBAND TYMPANOMETRY

- Generates a wideband average tympanogram over a range of frequencies
- Includes wideband absorbance graph
- Automatically provides tympanograms for 226, 678, 800 and 1000 Hz

NORMATIVE DATA

- Includes norms for infants, children, adolescents, and adults
- Includes norms for ambient and peak measurements

TAKE THE NEXT STEPS

Visit grason-stadler.com to learn more about the WideBand Tympanometry testing capabilities on the GSI TympStar Pro™.
